This book will show you how to create C/C++-enabled mobile applications and integrate them with Java. The book starts with teaching you how to access native API and port libraries used in some of the most successful Android applications. Next, you will move on to create a real native application project

through the complete implementation of a native API and porting existing third-party libraries. Moving forward, you will learn how to access the keyboard and input peripherals and read accelerometer or orientation sensors. Finally, you will dive into more advanced topics such as RenderScript.
