# Learn iPhone & iPad App Development with FileMaker Pro: FileMaker Pro Server Database Functionality for all of your Apps

The iPhone and the iPod Touch have been a tremendous success! Apple is now the third largest mobile phone manufacturer by revenue. Applications available on the App Store have reached six figures and app downloads are now in the billions. The recent release of the iPad will only continue to expand this phenomenal wave of excitement! With FileMaker software, you can create, customize, and share easy-to-use software solutions quickly and easily. Millions of customers - individuals, small businesses, teams in education and government, workgroups in Fortune 100 companies - all manage, analyze, and share information with FileMaker database software. The marriage of these two technologies is the focus of Building iPhone & iPad Apps with FileMaker Pro Server. Written in a friendly, easy-to-follow style, Building iPhone & iPad Apps with FileMaker Pro Server walks you through the process of creating an iDevice (an iPhone/iPod Touch/iPad) application from start to finish. Youll learn how to create a FileMaker Pro database that will be used on your computer to exchange data to and from your app. Youll start by creating a small demo application. From there, youll learn about Core Data, an important persistence mechanism that will store your users data on the device. Youll also see how to handle data editing and syncing. Youll create two User Interface models: one for the larger iPad and one for the smaller iPhone/iPod Touch. Well work with several virtual keyboards, well utilize some multi-threading, and well add Push Notifications. In addition, well explore ways to add some functionality to the FileMaker database so that local computer users can use and share the same data.

What youll learn create, customize, and share easy-to-use Filemaker database solutions for millions of customers quickly and easily allow your application users

to manage, analyze and share information with Filemaker database software   how to create an iPhone OS App from start to finish for iPhone, iPod touch, and iPad   how to achieve data persistence with Core Data   about data editing and data-syncing facilities   how to utilize multi-threading   how to add Push notifications to your apps   Who this book is for   This book is for anyone who wants to learn to write an iPhone/iPad app that shares its data with a hosted FileMaker database.No previous iPhone programming experience is required. No previous FileMaker experience is required. If you are an experienced iPhone developer you can discover the benefits of using FileMaker in your data model. If you are an experienced FileMaker developer you can learn how to take your database solutions mobile.
