If you do much work on computers, eventually you find that theres some task youd like to automate. For example, you may wish to perform a search-and-replace over a large number of text files, or rename and rearrange a bunch of photo files in a complicated way. Perhaps youre writing a test suite for such a library and find writing the testing code a tedious task. Or maybe youve written a program that could use an extension language, and you dont want to design and implement a whole new language for your application. Python is just the language for you.
