

Hacking with Swift Project 19 - Capital Cities

Teach users about geography while you learn about MKMapView and annotations. Its time for another app project, and this time youre going to learn about MapKit Apples mapping framework that lets us drops pins, plan routes, and zoom around the world with just a few swipes. Working with MapKit requires you to learn quite a few new classes, so Ive tried to construct a project simple enough that we can focus on the mapping element. In this project youll make an app that shows the locations of capital cities around the world, and when one of them is tapped you can bring up more information.
