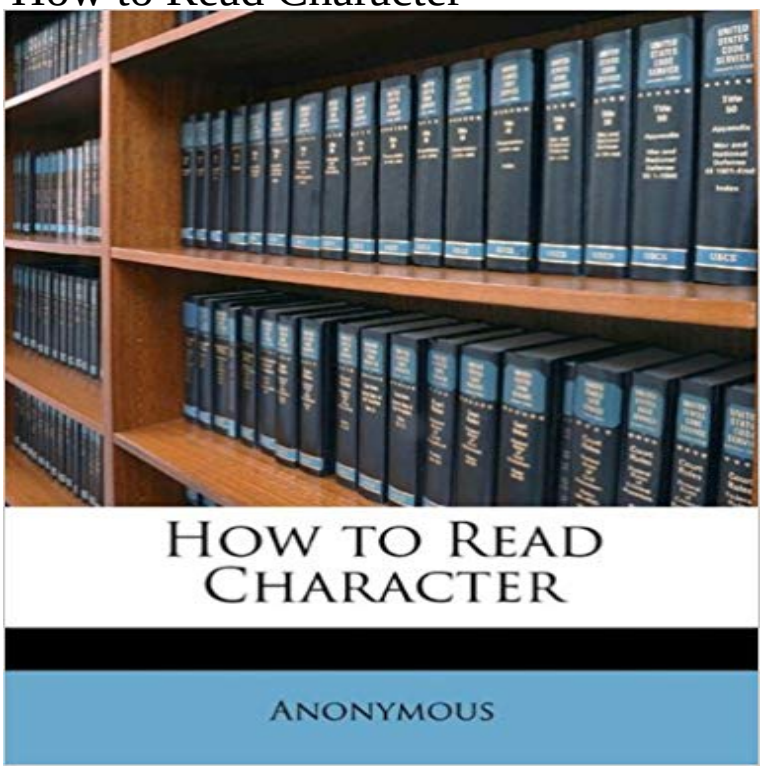
How to Read Character



This is an EXACT reproduction of a book published before 1923. This IS NOT an OCRd book with strange characters, introduced typographical errors, and jumbled words. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Method (Char[], Int32, Int32 - MSDN - Microsoft How to do scanf for single char in C - Stack Overflow Call next() on the Scanner, and extract the first character of the String. If you want to read the rest of the line as characters, iterate over the remaining characters in the String. Use the Reader API instead of the Scanner API. The () method delivers a single character read from the input stream. **How do I read in a character variable with varying length in a space** I have a char array and I want to assign values from the console.
