

Machine-to-machine (M2M) Communications: Architecture, Performance and Applications (Woodhead Publishing Series in Electronic and Optical Materials)

Part one of Machine-to-Machine (M2M) Communications covers machine-to-machine systems, architecture and components. Part two assesses performance management techniques for M2M communications. Part three looks at M2M applications, services, and standardization. Machine-to-machine communications refers to autonomous communication between devices or machines. This book serves as a key resource in M2M, which is set to grow significantly and is expected to generate a huge amount of additional data traffic and new revenue streams, underpinning key areas of the economy such as the smart grid, networked homes, healthcare and transportation. Examines the opportunities in M2M for businesses. Analyses the optimisation and development of M2M communications. Chapters cover aspects of access, scheduling, mobility and security protocols within M2M communications.
