

Make: Action: Movement, Light, and Sound with Arduino and Raspberry Pi

Beginning with the basics and moving gradually to greater challenges, this book takes you step-by-step through experiments and projects that show you how to make your Arduino or Raspberry Pi create and control movement, light, and sound. In other words: action! The Arduino is a simple microcontroller with an easy-to-learn programming environment, while the Raspberry Pi is a tiny Linux-based computer. This book clearly explains the differences between the Arduino and Raspberry Pi, when to use them, and to which purposes each are best suited. Using these widely available and inexpensive platforms, you'll learn to control LEDs, motors of various types, solenoids, AC (alternating current) devices, heaters, coolers, displays, and sound. You'll even discover how to monitor and control these devices over the Internet. Working with solderless breadboards, you'll get up and running quickly, learning how to make projects that are as fun as they are informative. In *Make: Action*, you'll learn to: Build a can crusher using a linear actuator with your ArduinoHave an Arduino water your plantsBuild a personal traffic signal using LEDsMake a random balloon popper with ArduinoCool down your beverages with a thermostatic drink cooler you build yourselfUnderstand and use the PID control algorithmUse Raspberry Pi to create a puppet dance party that moves to your tweets!
