

XML and Soap Programming for BizTalk Servers (DV-MPS Programming)

Description: With XML Programming For BizTalk Servers, enterprise developers get the work-ready information and tools they need to help their organizations meet the challenge of doing business in Internet time. Author Brian Travis -- a highly regarded XML instructor and solutions developer -- offers expert guidance for building real-world, business-to-business (B2B) e-commerce applications using XML and BizTalk. This practical, code-rich book begins with an overview of XML in the B2B context, including coverage of XSL and industry schemas. Readers then dive into the BizTalk framework for application integration, stepping through the development of a working BizTalk server application. All the books code is featured on CD-ROM so programmers can see what the syntax looks like and better comprehend the intricacies of implementing BizTalk solutions; the BizTalk JumpStart Kit helps expedite development of their own B2B applications. Case study discussions and a summary of references help round out the readers understanding of technological and business considerations.
