

# How to Make Recurring Money by Hosting WordPress Sites: Using Ubuntu Linux, Nginx, Amazon S3, and RamNode

Want to make recurring passive income? This book will teach you proven techniques on how to set up a client website on a virtual dedicated Linux server and how to provide premium features such as daily backups, at the lowest possible price for you, so you have the largest possible profit.

You can also take these skills and instead of running a business hosting client websites, use them to host your own websites, saving you money! I'm a firm believer that doing it yourself will not only save you money, but the skills you learn to build a server from scratch with the command line will open up new worlds for you and make it not such a scary vision to see a black screen with white text. If you already have experience with the command line, then you'll pick up on my techniques very quickly. If you have no experience with the command line, don't worry, you can follow along step by step. Commands and screenshots are included to provide clarity through each step. Each chapter also has a worksheet you can reference in the future. DETAILS Its not completely necessary to have set up a server from scratch or to have worked with a virtual private server in the past. Having a will to learn and ask questions is all you need to be successful with this book. If you've never worked with WordPress, Nginx, or Ubuntu Linux, you will learn what you need to do to make recurring money in this book. We will be covering specifically how to set up a Linux VPS from RamNode web hosting - quickly discussing why VPS is better than shared hosting - setting up the Ubuntu-specific packages using apt-get, and configuring Nginx, a MySQL database, and WordPress to get your first site up and running. Then we'll add multiple websites onto the same virtual machine, where your profit margin gets maximized if you choose to take these skills and run a business making recurring money. You can also take these skills to

learn something new, or to host your own websites, whether they are WordPress-based or not! AUTOMATION SCRIPT INCLUDED At the end of this course there is a script Ive developed that does everything youll learn, in about minute. You can quickly set up new sites just by running the script and answering a few questions. I highly suggest to learn the techniques before you take shortcuts, but you can always skip to the script its up to you!
