

The Political Economy of Noncompliance: Adjusting to the Single European Market (Routledge Advances in European Politics)

The Political Economy of Noncompliance explains why states fail to comply with international law. Over the last sixty years, states have signed treaties, established international courts and other supranational institutions to achieve the benefits of international cooperation. Nowhere has this been more successful than in the European Union. European integration has produced one of the most intensely legalized regimes in the world. Yet, even in the European Union, noncompliance of states often occurs. This book explores the sources of and reasons for noncompliance, and assesses why noncompliance varies across the Member States and over time by looking at the domestic politics of complying with international law. The author uses examples from the history of economic integration in the EU in three countries and two different policy areas to demonstrate these mechanisms at work. The Political Economy of Noncompliance will be of interest to students and scholars of European Politics, international relations and political economy.
