

Python 3.x: Beginners Handbook, Learn Easy: Take Input, Give output (Computer Programming For Everybody: Learn Easy Series Book 1)

This book is intended for the programming beginners. I presume that you don't have a long programming experience. You are completely new or know a very little about computer programming. It is written in a lucid style. It is not a book that claims to be of beginners but actually for the programmers. It will teach you the basics of programming in Python. Step by step this series will teach you the technique of using Python in Ethical Hacking, Socket Networking. Python is a high level language like C, C++, Java, Perl, PHP etc. There are also low level languages that are often called machine language. The advantage of any high level language is that, it can be written easily. Python is probably the easiest to learn. As a beginner you need to know what a Program is. A Program is a sequence of instruction that you give to the computer to compute. This computation may involve some basic mathematical work like addition or subtraction or it can be a text based search or open a web page where user can log in and buy something. Python can do everything. Remember, any program written in Python or any language does issue some instructions. And they are more or less same. They are: INPUT: Get data from keyboard or any file or any source. OUTPUT: Display data on screen or send it to any file, device or any other source. MATHEMATICS: Do some basic mathematical operations like add, subtract, multiply or divide. It can be complex also. It depends on your application. CONDITIONAL EXECUTION: Check that the conditions are properly met. Like if that is true then do something else do some other thing. REPETITION: Perform some action repeatedly. You see many big applications. They all follow these simple rules. You can break a big task into several sub tasks and that is programming. Chapter One - Preface Dedication About the Author Few Words for Complete

Beginners Introduction Chapter Two
How to set up your environment? Chapter
Three General Syntaxes 3.1 - Create the
main() function 3.2 - Indentation and
White Space 3.3 Commenting 3.4 -
Assigning Values Chapter Four Variables,
Objects and Values 4.1 Using Numbers
4.2 String 4.3 - What is Type and ID
4.4 - Logical Values 4.5 - Tuples And
Lists 4.6 Dictionary 4.7 Object
Chapter Five - Conditionals Chapter Six
How Loops Make Your Life Easier 6.1
While Loops 6.2 - For Loops Chapter
Seven - Regular Expressions 7.1 Using
re Module 7.2 - Reusing With Regular
Expressions 7.3 - Searching With
Regular Expressions Chapter Eight
Exceptions, Catching Errors Chapter Nine -
Functions 9.1 - Return Values 9.2 -
Generate Functions 9.3 - Lists of
Arguments 9.4 - Named Arguments
Chapter Ten - Classes 10.1 Object
Oriented Methodology 10.2 The
Foundation of Object Orientation 10.1 -
Understanding Classes and Objects 10.2
Write Your Own Game Good VS Bad
10.3 - Primary Class and Object 10.4
Accessing Object Data 10.5 -
Polymorphism 10.6 - Using Generators
10.7 - Inheritance 10. 8 -Decorator
Chapter Eleven - String Methods Chapter
Twelve - File Input And Output Chapter
Thirteen - Containers 13.1 - Operating
on Tuple and List Object 13.2 -
Operating on Dictionary Object Chapter
Fourteen Database 14.1 - Let us start
with SQLite3 14.2 MySQL for Big
Project Chapter Fifteen - Module Chapter
Sixteen Debugging, Unit-Test Module
Chapter Seventeen Your First Web Project
in Python with Flask Chapter Eighteen -
Python and Networking Basic
