

Professional Symbian Programming: Mobile Solutions on the EPOC Platform

This book is about understanding and programming the EPOC operating system in C++ and Java. EPOC is a robust 32-bit operating system designed specifically for the demands of mobile computing. EPOC was developed by Symbian, a partnership formed by Motorola, Nokia, Ericsson, Matsushita and Psion. Since its creation, Symbian has forged partnerships and licensing deals with other industry leaders including Philips and Palm. Already implemented on hardware manufactured by Psion and Ericsson, EPOC will be the OS of choice for the next generation of smartphones, wireless information devices and handheld computers.
