

The American Century 2-Volume Boxed Set: Art and Culture, 1900-2000

A slipcased set of the two American Century volumes, published in association with the Whitney Museum of American Art. The American Century is the subject of a year-long exhibition at the Whitney Museum --the most comprehensive display of twentieth-century American art ever assembled, incorporating a wide range of masterpieces from all sections of the country, by both familiar and lesser-known artists. Volume I, covering the first half of the century, is a history of American art as well as a permanent record of the Whitney show. Here fine arts achievements are seen as part of the larger culture that helped shape them --the art forms of film, dance, music, literature, photography, decorative arts, architecture, fashion, and industrial design. All are described and set in the context of political and social currents of the era in Barbara Haskell's rich and informative text. Essays by noted experts in many fields illuminate developments in different areas of artistic endeavor while over 750 full-color and duotone illustrations give visual testimony to America's dominant role in the arts. Volume II is a compelling panorama of art in America during the second half of this century. Shortly after the Second World War a group of American artists moved away from representation and realism toward a completely nonrepresentational style which became known as abstract expressionism. Led by Jackson Pollock, Willem De Kooning, and others, it was the first truly American painting style, and it quickly moved the United States into the forefront of innovation. A succession of other movements followed, including Pop Art, with adherents like Andy Warhol and Roy Lichtenstein; the performance art of John Cage and others; video art, led by Nam June Paik; and installation art of grand proportions. In this expansive volume Lisa Phillips explains the excitement and inventiveness of American artists in the

context of the varied and sometimes turbulent social environment as well as the expanding economy of postwar America. Essays by experts in related fields illuminate parallel and diverse developments in architecture, dance, music, literature, painting, sculpture, cinema, and design. With over 700 color and duotone illustrations.
