

## WP Pro Simple Security (WP Pro Business Guides Book 4)

Securing your WordPress-powered website is critical to protecting your content and your livelihood, and something that should not be ignored. Unfortunately, many of us don't think of security from the very start of building our websites. When you have a brainstorm for a new website or online business idea, one of the first things you do is purchase a domain name and hosting. Are you thinking of your website security when you create your hosting account username and password? If you are, then I applaud you, but I'm willing to bet that's not the case for most of us. And of course, that's only the start. We can get so wrapped up in nurturing our new online business ideas and building our websites and our content, that we have a tendency to ignore security. Obviously it's not a conscious decision to think, "hey, I'll build this awesome site, spend hundreds of hours building it and generating an income, and invite malicious spam and hacker scripts and individuals to take it down. That would be fun. In essence that's what you're doing if you are not proactive about your WordPress website security from the very start. Security is not a choice when managing your own website. It's an integral part of the process and our WP Pro Simple Security manual will show you exactly how to secure your WordPress website building process. The security methods shown in this manual have been organized into different subsections to help you easily find and implement each security measure. Those sections are: Common Sense Security, Hosting Account Security, Database Security, WordPress Specific Security, Manual Edits Security, Security Plugins, Security Habits...and Much More! Here's a small sample of some more specific security topics included: Secure Computing, Recommended Antivirus and Security Software for PC and Mac, Common Sense Security, Strong Username Passwords, Password Generator

and Management Tools  
Choosing Themes  
A Theme Hacking Story  
Choose Your Themes Wisely  
Theme Resources I Use and Recommend  
Choose Your Plugins Just as Wisely
