

The Essential Guide To Vaccinations (Toxic World Toxic People Book 2)

Do you have valid reasons to be worried about giving your children vaccines? What about the 70+ vaccinations that Doctors and the CDC require? Are parents being told everything that they should be told about these life saving vaccinations? In *The Essential Guide*, health writer Anna Rodgers takes you through the research she was driven to do as a researcher and a concerned new mother. Questions like: Are the vaccines safer than the diseases that they're supposed to protect against? Why are there now so many more vaccines on the schedule today versus the 1980s? Has that entire schedule been tested for safety? Has there been a comparative study between vaccinated and unvaccinated children? What are the common ingredients in vaccines? Why are there known neurotoxins in vaccines? With mothers being advised to stay away from eating fish due to mercury content when pregnant, why is it ok to have it in vaccines? Many parents think that mercury has been removed from vaccines - but has it truly? Is the medical and pharmaceutical industry honest? How does fraud affect vaccine safety? Inside *The Essential Guide* you will learn what you need to know to make an informed choice about whether or not to vaccinate your child according to the schedule. The book also features stories from parents whose children had adverse reactions to vaccines. Were they told the risks? Were they pressured or given true informed consent? But some medical doctors are not pro-vaccine: what made them change their minds? Why did one of these doctors win her anti-vaccine case with the Medical Council in the UK? In life we study for exams at school, or to drive a car, or a new job, but are we doing enough study when it comes to the medications we are giving our children? Surely this deserves the greatest amount of study before making such serious decisions. *The Essential Guide* to

Vaccinations is a wonderful, safe, informative place to start.
