

# Assembly Language Programming for Intel Processors Family

ABOUT THE BOOK Assembly Language Programming for INTEL processors family presents the assembly language for the family of INTEL processors, from the 80286 processor to the Pentium 4 processor. All references made to 386, 486, and later processors of the INTEL family include, implicitly, the Pentium II, III, and IV processors. The first section the internal architecture of the processors: computer system architecture, from the application level to the computer component level; memory architecture; general organization and operating modes of the current superscalar processors, including examples from the INTEL family processors, from 80286 to PENTIUM 4 processors; instruction format of the Intel processors and the addressing modes used to obtain the operands. The second part contains a presentation of the assembly language, accompanied by numerous examples.
